AGROFENOLOGIA

(VITE)

Permane la fase di riposo vegetativo delle piante.

OPERAZIONI AGRONOMICHE E INTERVENTI FITOSANITARI SUGGERITI

In questa fase non si segnalano particolari criticità dal punto di vista fitosanitario. Vale la pena segnalare l'espansione del Mal dell'esca. Tra i prodotti utilizzabili per limitare i danni e la diffusione all'interno del vigneto della malattia e in generale dei funghi che provocano danni al legno si segnalano i prodotti a base di *Trichoderma* spp, ammessi anche in agricoltura biologica. Si tratta di ceppi di funghi selezionati che occupano lo spazio dove potrebbero svilupparsi i funghi patogeni (competizione spaziale), competono per i nutrienti creando anche una sorta di barriera alla penetrazione dei funghi patogeni, e possono svolgere anche funzioni di parassitismo diretto attraverso la formazione di metaboliti/tossine/enzimi che attaccano il patogeno. I prodotti possono essere applicati attraverso atomizzatori o spennellatura manuale. Nel caso del mal dell'esca, vanno indirizzati verso le ferite della potatura.

Proseguono le operazioni di potatura. Nei vigneti che hanno manifestato problematiche di stanchezza o di asfissia radicale si consiglia di procedere con il taglio delle radici a circa 60-100 cm dal filare. Per i nuovi vigneti si consiglia di aspettare che si concluda il periodo di maggior freddo per la potatura, ciò al fine di evitare che eventuali gelate possano compromettere le piante, e procedere in prossimità della ripresa vegetativa quando la pianta potata cicatrizza in modo eccellente.
